This application contains claims directed to the following patentably distinct species: Species I, claim 6 (substrate alignment unit, classified in class 118, subclass 500); Species II, claim 7 (method of depositing a metal structure on a substrate having recesses, classified in class 427, subclass 243); Species III, claims 8 and 9 (method of separating particles from a fluid using a microstructure having channels, classified in class 210, subclass 649) and Species IV, claims 10 and 11 (method of producing an emulsion by mixing first with second fluid in a microchannel substrate, classified in class 366, subclass 340). The species are independent or distinct because of their different classification, different required search and disparate subject matter.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-5 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.
MPEP § 809.02(a).

A telephone call was made to Surinder Sachar on August 24, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.
